

Thanks for your help in mapping the health of the population during and after the COVID-19 pandemic – how are you doing now?

Dear «ConnectNavn» «ConnectNavn»,

Many thanks for previously completing one or more questionnaires for the EFTER-COVID study. In this way, you have helped map the health of the population during and after the COVID-19 pandemic.

We can see that you have since tested positive again, but your answers are still valuable to us. We would like to follow up on how you are doing after your recent positive test. Therefore, we are contacting you again and asking you to answer a short questionnaire via the link below.

In the EFTER-COVID study, we are examining the long-term effects of COVID-19. When completing the follow-up questionnaire, you help create more knowledge – e.g. about acute symptoms and the development of long-term symptoms following re-infection.

How to complete the EFTER-COVID questionnaire

Return to the Danish letter in your E-boks and click on the link “Åben spørgeskema” to access the questionnaire.

Once you are on the first page of the questionnaire you can switch to the English version by clicking the “EN” button at the bottom of the questionnaire page.

It takes 5–15 minutes to complete the form, depending on how many symptoms you have had.

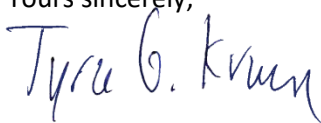

The questionnaire can also be accessed by going to www.survey-xact.dk/collect
Enter your 12-digit password in the field “Nøgle”.

If you need to pause and come back to the questionnaire, you can resume answering where you left off.

We very much hope that you will take the time once again to complete the survey, thereby contributing to new important knowledge about the health of the population and the long-term effects of COVID-19.

Many thanks in advance for your help.

Yours sincerely,

Tyra Grove Krause
Head of Department, Infectious Disease Epidemiology & Prevention
Statens Serum Institut
